

Housing Project, FCT-Abuja, NIGERIA

November, 2011

Proposal
Studio-CVC, Nigeria

The project is proposed to ameliorate the housing shortage in FCT- Abuja. It comprises of seven units of self-serviced apartments in a property of less than 1500 square meters. Each unit is designed to be off-grid, while supplying its own energy requirements. The roof top is designated as a collective space for the different families with the intention to encourage social interactions among the neighbours. The materials proposed for the project are aerated concrete, brick and glass, and are designed to suit the tropical climatic conditions. The project is designed to to serve as sustainable housing model for young families in FCT-Abuja.
