

Transit Oriented Project, FCT-Abuja, NIGERIA

August, 2009

Proposal
Studio-CVC, Nigeria

The proposal seeks to recuperate identified lost spaces within the green belt of the central district of the city, and converting them to vibrant public spaces which are along the designated light rail transit corridor. The project uses station No.15, which is at the border of three different districts (Central Business district, Maitama district, and Wuse II district), and unifying them with the green belt. The proposed intervention aims at creating interconnectivity of public space continuum, mixed-use development and dynamic collective infrastructure in the city.
